OBJECTIVE

My long-term goal is to build general-purpose AI systems that can reason, plan, and solve complex problems reliably. I am especially interested in world models, abstract representations, and model architectures beyond Transformer-centric approaches.

- **World Models:** Learning internal models for long-horizon reasoning and planning.
- **Reasoning and Planning:** Methods for solving complex multi-step problems.
- **New Model Architectures:** Alternatives to Transformer-centric models for memory, abstraction, and scalable reasoning.
- **Reliable AI Agents:** Verification and self-correction for autonomous systems.

EDUCATION

Korea Advanced Institute of Science and Technology (KAIST)

B.S. in School of Computing

Mar. 2023 – Feb. 2029 (expected)

Daejeon, South Korea

RELEVANT COURSEWORK

AI/ML Foundations: Probability and Statistics (A+), Introduction to Algorithms (A-), Data Structure (A-), Machine Learning ([self-studied](#))

Programming and Systems: Introduction to Programming (A+), System Programming (A)

MILITARY SERVICE

Republic of Korea Air Force

Security Systems Operations Specialist

Apr. 2025 – Jan. 2027

South Korea

- Currently serving mandatory military duty in the Republic of Korea Air Force.

SKILLS

Programming: C, C++, Python, PyTorch

Languages: Korean (Native), English: Professional proficiency (TOEFL iBT 5.5/6.0, Mar. 2026)
